PROFESSIONAL SUMMARY

ICT Honours Student and Microsoft Certified Fabric Data Engineer (DP-700) bridging software architecture and big data. Proven expertise in building end-to-end automated pipelines, Medallion architectures, and scalable cloud infrastructure using Python, SQL, Azure, and Databricks.

TRAINING & INDUSTRY EXPERIENCE

Data Analytics Job Simulation 2026
Quantium
- Completed Quantium's industry-standard data analytics simulation covering customer behaviour analysis, commercial insight generation, and data-driven decision making
- Produced analytics deliverables using Python and statistical techniques; outcomes documented in a public GitHub repository

EDUCATION

Bachelor of ICT Honours NQF 8 (In Progress) 02/2026 – 11/2026
Durban University of Technology Durban, South Africa
- Specialisations: Machine Learning, Cloud Computing, Advanced Software Development, Advanced Cybersecurity, Applied Research, Global Professional Issues
- Research: Evaluating Cost Sensitive Machine Learning in Vehicle Insurance Fraud Detection

Bachelor of ICT NQF 7 02/2023 – 11/2025
Durban University of Technology Durban, South Africa
- Overall average: 72% | 15 Distinctions across three years of study
- Key Modules: Business Intelligence III, Machine Intelligence III, Software Engineering III, Programming Languages II, Information management II
- Honours-qualifying academic record met all requirements for NQF 8 progression

CERTIFICATIONS

Microsoft Certified: Fabric Data Engineering Associate (DP-700)
Issued by Microsoft, Expires Sept 2026, ID: A7FCE4B07394D5FD

Microsoft Certified: Azure Data Fundamentals (DP-900)
Issued by Microsoft, Nov 2025, ID: 90F630A6FDECDE6

Databricks for Data Engineering
Issued by Databricks, Nov 2025

dbt Fundamentals
Issued by dbt Labs, 2026

SQL Intermediate
Issued by Sololearn, 2026, ID: CC-4F6HJQ7S

Data Engineer Associate
Issued by DataCamp, Expires 2028, ID: DEA0010659484472

Databricks Fundamentals
Issued by Databricks, Dec 2025, Expires 2026

Spark Fundamentals I
Issued by IBM, Nov 2025, ID: 3679134REG

Quantium Data Analytics Job Simulation
Issued by Quantium via Forage, 2026

TECHNICAL SKILLS

Data Engineering & Analytics
- ETL/ELT Pipeline Design & Deployment
- Data Warehousing & Modelling
- Business Intelligence & KPI Reporting
- Data Quality, Validation & Governance

Cloud & Big Data Platforms
- Microsoft Fabric (Lakehouse, Data Warehouse, Pipelines)
- Databricks (PySpark, Delta Lake)
- Data Build Tool (dbt)
- Docker, CI/CD, Git, Linux CLI

Additional Technical Skills
- PySpark, Django, Flask, ASP.NET, Next.js
- Digital Innovation & Problem Solving

Programming Languages
- Python, C#, Java, SQL & KQL

Professional Competencies
- Analytical & Design Thinking
- Problem solving
- Research & Academic Writing

PROJECTS & TECHNICAL ACHIEVEMENTS

SA Bank Data Quality & POPIA Pipeline 01/2026 – Present

Personal Project
- Engineered a production-grade data quality pipeline processing South African banking records, storing validated data in a Parquet-based Delta Lake Silver layer.
- Implemented strict POPIA compliance by developing SHA-256 hashing and UUID tokenisation mechanisms to mask sensitive customer PII (SA IDs, cellphones, emails).
- Integrated an 8-rule fraud scoring engine and an IsolationForest Machine Learning model to automate transaction anomaly detection.
- Designed a 3-state circuit breaker for pipeline fault tolerance and deployed a live Streamlit dashboard for real-time monitoring and audit logging.
- Stack: Python, Pandas, Delta Lake, Scikit-Learn, Streamlit, APScheduler

SA Financial Crime & Fraud Intelligence Platform 05/2026 – 09/2026

Personal Project
- Architected an enterprise-grade financial crime detection platform on Microsoft Fabric, implementing a full Bronze-Silver-Gold Medallion Lakehouse architecture.
- Engineered PySpark pipelines to clean and join South African company registrations with OpenSanctions datasets, utilizing Levenshtein distance fuzzy matching for accurate KYC screening.
- Configured Fabric Eventstream and a KQL Database to ingest live banking transactions, deploying automated Kusto queries to flag FICA threshold breaches and transaction velocity spikes in real time.
- Designed a Power BI compliance dashboard connected directly to the Lakehouse SQL Analytics Endpoint, providing aggregated risk scores and fraud alerts with zero data movement.
- Stack: Microsoft Fabric, PySpark, KQL (Kusto Query Language), Eventstream, Delta Lake, Power BI, Python

ADDITIONAL INFORMATION

Additional Details
- Languages: English (Fluent), isiZulu (Conversational)
- Availability: Immediately available | On-site, Hybrid, or Remote
- Willing to relocate to Johannesburg or Cape Town
- References: Available upon request
